**Don:**

**The treatment of FT1004 is being cancelled. We were unable to get the State Waste Code information as well as the weather. We plan to reschedule for next week.**

**Thanks**

**Subject:** CES: FT1004 (Heads Up)

**Don:**

**We (EPA/TCEQ) are planning on doing the odor treatment on FT1004 tomorrow. The chemicals to be used to do this treatment are Sodium Hypochlorite, Hydrogen Peroxide, and Captaban. The treatment will be done in batches. The fugitive emissions will be routed through our 10000 lb carbon unit. The treatment vessel will be FT1002.**

**I anticipate no issues associated with the treatment of the materials and subsequent disposal. You may want to have your environmental investigators around the area tomorrow to do some air monitoring as we will be doing the same. The wind is going to be out of the North and the Frac Tanks are located at the North side of the facility. The contractor performing this activity and also disposing of the waste is Lonestar Ecology, LLC. They will arrive on-site at approximately 0830 to set up. I assume that we will begin around 0930/1000.**

**Thanks**

**Gary Moore**
